To: 3407 Amit Kumar <amitkumar_13195@aitpune.edu.in>;

We have received your submission to arXiv. Your temporary submission identifier is: submit/1876679.

You may update your submission at: https://arxiv.org/submit/1876679

Your article is scheduled to be announced at Mon, 1 May 2017 00:00:00 GMT.
The abstract will appear in the subsequent mailing as displayed below, except that the submission identifier will be replaced by
the official arXiv identifier. Updates before Fri, 28 Apr 2017 18:00:00 GMT will not delay announcement.

A paper password will be emailed to you when the article is announced. You should share this with co-authors to allow them to claim ownership.

If you have a problem that you are not able to resolve through the web interface, contact help@arxiv.org with a description of the issue and reference the submission identifier.

Title: Intelligent Personal Assistant with Knowledge Navigation
Authors: Amit Kumar, Rahul Dutta, Harbhajan Rai
Categories: cs.AI
Comments: Converted O(N3) solution to viable O(N) solution
License: http://arxiv.org/licenses/nonexclusive-distrib/1.0/
\\
   An Intelligent Personal Agent (IPA) is an agent that has the purpose of helping the user to gain information through reliable resources with the help of knowledge navigation techniques and saving time to search the best content. The agent is also responsible for responding to the chat-based queries with the help of Conversation Corpus. We will be testing different methods for optimal query generation. To felicitate the ease of usage of the application, the agent will be able to accept the input through Text (Keyboard), Voice (Speech Recognition) and Server (Facebook) and output responses using the same method. Existing chat bots reply by making changes in the input, but we will give responses based on multiple SRT files. The model will learn using the human dialogs dataset and will be able respond human-like. Responses to queries about famous things (places, people, and words) can be provided using web scraping which will enable the bot to have knowledge navigation features. The agent will even learn from its past experiences supporting semi-supervised learning.
